

自从以太坊兴起，在ETH上发行ERC2.0代币也流行起来，发币再也不用搭建矿池、编写钱包等等，也不用挖矿了，发行多少币，填个数字即可，几千亿也秒秒钟生成完毕，一时间空气币风起云涌多如牛毛，撸都懒得撸了。

而传统的矿币呢，越来越少，老一代的比特币、莱特币等等，早已被矿霸矿机占领，小散户的电脑没有参与的可能了，就算使用高端显卡都挖不到了，用CPU就更别想了。

所以当Ulord (优壹币) 问世以后，立刻吸引了大家的关注，其他的都不说了，这个币现在还是只能用CPU挖，不能用显卡，不能用矿机，所以，家用PC也能挖！而且挖出来还挺抢手，一个币现在11元很好出手，群里都是收币的。一时间，很多币友又开始谈论挖矿了，平时一边上网，一边开着挖矿程序，挖UT币，不知不觉赚点小钱挺美。

然而，最近很多矿工遇到一个问题，就是Ulord的官方挖矿程序一开就蹦出提示“加载组建失败”如下图，没法玩了，这个毛病还挺难解决。我也遇到了，又是打补丁又是更新系统，卸载重装，故障依然。

正当我着急的时候，在Ulord官网社群里，听币友们说，现在有个“优优矿池”提供一个优化算法的挖矿程序可以解决这个问题，于是去下了一个，一试还真灵，故障消除不说，算力还提升了30%左右！过去在官池里一天挖不到0.1-0.2个币，结果用新程序在优优矿池，一天竟然挖了一个多币，相当于过去10倍还多！看下面钱包到账截图，6.12日这一天收了好几次矿池支付的币，总和相当于过去好几天的收入：

The screenshot shows a mobile application interface for a wallet. At the top, there is a menu bar with icons and text: '文件(F)', '钱包(W)', '工具(T)', and '帮助(H)'. Below this is a header row with tabs: '历史' (History), '支付' (Payment), '收款' (Receipt), '地址' (Address), and '联系人' (Contact). The '历史' tab is selected. The main content is a table of transactions with the following columns: '日期' (Date), '备注' (Remarks), '金额' (Amount), and '余额' (Balance). The table contains 13 rows of data, each with a yellow checkmark icon on the left. The first row shows a transaction on 2018-06-13 11:59 for '手机钱包' (Mobile Wallet) with an amount of -0.27281452 and a balance of 0.000000. The second row shows a transaction on 2018-06-12 14:02 with an amount of +0.15781638 and a balance of 0.27281452. The third row shows a transaction on 2018-06-12 10:02 with an amount of +0.11499814 and a balance of 0.11499814. The fourth row shows a transaction on 2018-06-12 07:41 for '挖矿手机新地址' (Mining mobile new address) with an amount of -1.57099291 and a balance of 0.000000. The fifth row shows a transaction on 2018-06-12 06:00 with an amount of +0.20204781 and a balance of 1.57099291. The sixth row shows a transaction on 2018-06-12 04:16 with an amount of +0.55446849 and a balance of 1.3689451. The seventh row shows a transaction on 2018-06-12 03:31 with an amount of +0.24812272 and a balance of 0.81447661. The eighth row shows a transaction on 2018-06-08 08:00 with an amount of +0.11337408 and a balance of 0.56635389. The ninth row shows a transaction on 2018-06-06 20:01 with an amount of +0.10846847 and a balance of 0.45297981. The tenth row shows a transaction on 2018-06-06 04:10 with an amount of +0.12845132 and a balance of 0.34451134. The eleventh row shows a transaction on 2018-06-05 16:00 with an amount of +0.10037082 and a balance of 0.21606002. The twelfth row shows a transaction on 2018-06-05 08:00 with an amount of +0.1156892 and a balance of 0.1156892.

我的电脑配置一般, E1230v2, 一共8核, 我用其中四核来挖矿, 其余四核上网写文章, 一点不影响, 算力稳定在800多H! 资源占用率也就70%不到, 电脑一点没有影响, 充分利用了电脑的资源, 如下图:

下图是一个矿工发的官方挖矿程序和优优矿池挖矿程序算力提升的对比图，真的是提升很大：
